DETAILED ACTION

Allowable Subject Matter

1. Claims 7-26 are allowed.
2. The following is an examiner's statement of reasons for allowance: Consider claim 7, the prior art of record by Chau et al (US 5,187,710) discloses a call billing method that provides real time access to rate charges and billing parameters to generate billing record for each call made. The billing method uses 1-900 number for value added services and charges accordingly the call after it's made without the need to access a look up table of call and charges records. Wallenius in his patent (US 6,760,417) teaches a system for charging a subscriber whereby the service control functions are handled by an intelligent network in which a billing unit maintains in real time the subscriber's charging data. The published US application (US 2005/0136889) by Zackrisson et al, discloses a charging system and method for determining rate charges for services such as value added services. The method has flexible rating differentiation that depends on data unique per subscriber. The charging system determines the rate charge associated with service requested by the subscriber by accessing and analyzing a tariff structure based on a list indicator corresponding to charging input parameters. However, even though claim 7 discloses similar charging structure involving an intelligent network intercepting a call or request for value added-service, claim 7 comprises a step where the value added service rate is sent from the value added service provider to the intelligent network through a release message in the form a new of a destination number such that the new destination number has the rate

associated with the requested value added service. While Chau discloses as depicted in figure 1, an intelligent network element (e.g. ACP) routes the 1-900 number to the value added service provider and updates the billing system according to the reported call identification, timing, Rating information. Chau does not teach that the new destination number assigned by the value added service provider has a form such that it has the applicable rate (included in the number) of the requested value added service. Similarly, neither Wallenius nor Zackrisson discloses explicitly or implicitly connecting the subscriber to the value added service provider with the newly assigned destination number carrying the applicable rate.

Claims 8-26, are dependent claims and inherit the limitation of claim 7; as a result said dependent claims are allowed.
